FIGURE 20

The diagram illustrates a power supply system. On the left, a dashed box labeled 1501 contains a transformer with two secondary windings. One winding is connected to a bridge rectifier (1502) and a filter capacitor (1503). The other winding is connected to a bridge rectifier (1504) and a filter capacitor (1505). The output of the first stage (1503) is connected to a second stage (1506) which consists of a transformer (1509) and a bridge rectifier (1510, 1511). The output of the second stage is connected to a third stage (1513) which consists of a transformer (1509) and a bridge rectifier (1510, 1511). The output of the third stage is connected to a fourth stage (1507) which consists of a transformer (1509) and a bridge rectifier (1510, 1511). The output of the fourth stage is connected to a fifth stage (1508) which consists of a transformer (1509) and a bridge rectifier (1510, 1511). The output of the fifth stage is connected to a sixth stage (1509) which consists of a transformer (1509) and a bridge rectifier (1510, 1511). The output of the sixth stage is connected to a seventh stage (1510) which consists of a transformer (1509) and a bridge rectifier (1510, 1511). The output of the seventh stage is connected to an eighth stage (1511) which consists of a transformer (1509) and a bridge rectifier (1510, 1511). The output of the eighth stage is connected to a ninth stage (1512) which consists of a transformer (1509) and a bridge rectifier (1510, 1511). The output of the ninth stage is connected to a tenth stage (1513) which consists of a transformer (1509) and a bridge rectifier (1510, 1511). The output of the tenth stage is connected to a final output terminal (1513).
